**2023**

WHOLESALE CATALOG

# The **CRIMSON TRACE** PROMISE

All Crimson Trace® products are covered under one of our two lifetime warranties. We stand behind our products, both past and future, so all CT products previously sold are grandfathered in to the Lifetime Warranty. These warranties are our pledge to you, our advocates, that you have chosen best-in-class gear to outfit your chosen need.

*\*Limitations and restrictions apply. See Crimson Trace website for details*

# The **CRIMSON TRACE**® DEFINITION

All Crimson Trace® products are packed full of innovative and patented features. Listed below are some of our best-in-class features you will find on our Coveted Gear.

**AEROSPACE GRADE ALUMINUM** - An aluminum alloy that can stand up to the rigors of aircraft and space flight.

**(AMR) ANGLED MODIFIED RANGE** - Angled Modified Range uses the Line of Sight range and the angle of incline/decline to the target to calculate the “horizontal distance” the bullet travels from shooter to the target. AMR is very accurate for shorter target distances (under 400 yards) and archery hunters.

**EXAMPLE:** In AMR mode if the target is 400 yards away horizontally, it is 363 yards away if the shooter is on a 25% decline.

**ANSI FL1 STANDARD** - The ANSI FL1 standard makes it easier for you to compare flashlights from different manufacturers. The ANSI FL1 standards allow users to rate and compare different features.

**AUTO-SHUTOFF FUNCTION** - The sight automatically shuts off after 8 consecutive hours of operation to conserve battery life.

**BDC RETICLE** - A Bullet Drop Compensation reticle or (BDC) is designed to compensate for the trajectory of a specific ammunition. These reticles have built-in hold-overs to allow the shooter to shoot at different ranges eliminating guesswork.

**BOTTOM ACCESS BATTERY COMPARTMENT** - Low profile but requires the user to remove the product from the firearm to change the battery.

**CAPPED TURRETS** - Twist off caps that protect the turrets from debris, or accidental adjustment.

**CLOSED (TUBE) REFLEX SIGHT** - A “Tube” reflex sight that has the LED and lens fully enclosed. This offers a brighter reticle and can have smaller “dots” for longer range targeting. The fully enclosed design also protects against debris, water, or weather that can block the LED on Open Reflex Sights.

**CT MICRO™ FOOTPRINT** - This footprint is designed for most compact handguns and is compatible with the Shield RMS® and JPoint® footprints.

**CT MOTION™ SENSOR** - Detects movement of the firearm and automatically turns the reflex sight on. The sight powers off after 2 minutes of being stationary.

**CT RAD™ FOOTPRINT** - This footprint is designed for most full size handguns and is compatible with the Docter® style footprint.

**CT RADIANT™ AMBIENT LIGHT SENSOR** - The ambient light sensor automatically adjusts the aiming dot's brightness to the surrounding lighting condition.

**EXPOSED TURRETS** - Visible turrets that are quick to adjust for D.O.P.E.-ing at various distances.

**EXTRA LOW DISPERSION GLASS** - ELD glass helps correct chromatic aberrations, or optical color defects, caused when different light wavelengths do not converge at the same point after passing through optical glass.

**FIRST MODE** - Allows the hunter to get the range of the object that has the best feedback from the laser on a laser rangefinder. This mode is typically used when a target is unobstructed and in clear view.

**FLIP-UP SCOPE CAPS** - A set of spring loaded polymer end caps for Riflescopes. These end caps protect the scope during transportation and inclement weather. They can be quickly opened with a flip of your finger instead of having to be manually removed and stored.

**FULL CO-WITNESS** - Red dots with Full Co-Witness allow you to use the red dot and the back up iron sights at the same time. This greater functionality means that in case the red dot fails, you can still utilize the iron sights without having to remove the red dot sight.

# The **CRIMSON TRACE** DEFINITION

**GREEN DOT** - All CT RAD™ green dots are 5 MOA for easy acquisition.

**ILLUMINATED RETICLE** - A glass etched reticle that can be illuminated with different colors for better low light targeting.

**IPX4 WATER RESISTANT** - Is resistant to water sprayed at the product from 360° for 30 minutes.

**IPX7 WATERPROOF** - Can be submerged in water up to 1 meter for 30 minutes.

**INSTINCTIVE ACTIVATION™** - Crimson Trace® Instinctive Activation™ technology is a best-in-class feature. Fully ambidextrous, all CT products incorporating Instinctive Activation™ are activated as end-users naturally grip their firearm.

**INSTANT ACTIVATION™** - “Tap ON/OFF” function allows the device to be deployed instantly. No long button push or delayed response.

**LAST MODE** - Allows the hunter to get the range of the object that is furthest distance in feedback from the laser on a laser rangefinder. This mode is often used when shooting through brush or when a target is not in clear view.

**(LRM) LONG RANGE MODE** - Long Range Mode allows the user to range areas at longer distances. This mode is good for hunters wanting to know the distance of far off landmarks.

**(LOS) LINE OF SIGHT MODE** - Line of Sight mode is the direct straight line from the shooter to the target without compensation due to angle. This mode is good for long range shooters or hunters wanting to know fixed distances.

**EXAMPLE:** In LOS mode the target is 400 yards away even if the shooter is on a 25% decline.

**LPVO LOW POWER VARIABLE OPTIC** - This type of magnified optic often starts at 1x magnification and increases anywhere from 4x, 6x to 10x. At 1x the optic can function almost like a red dot sight, with almost zero magnification allowing for quicker target acquisition.

**MANUAL ON/OFF FUNCTION** - Allows you to turn the sight on or off by using the brightness buttons.

**MIL SCOPE** - Stands for Milliradians, which correlates to the arc of a circle. A Milliradian circle circumference is divided into 6.28 equal radian sections. This is then divided into 1,000 equal parts called Milliradians. There are 6,280 Milliradians in a circle. 1 MIL spreads about 3.43” at 100 yards.

**MOA SCOPE** - Stands for the Minute of Angle, which correlates to the minute hand of a 360-degree clock face. Each minute refers to 1/60th of a degree, similar to the minutes of an hour. 1 MOA spreads about 1” at 100 yards.

**MOA DOT** - Determines the “size” of the dot or how much of the target the “dot” will cover. Using the MOA equation of 1” at 100 yards, a 2 MOA dot will cover 2” of the target at 100 yards and 4” of the target at 200 yards. Larger dots cover more of the target and are better for quick acquisition at closer ranges. Smaller dots will cover less of the target at greater distances.

**(MOC) MAXIMUM OPTIC CLARITY** - Crimson Trace® Optics are fully multi-coated with our proprietary MOC lens coatings. These coatings are engineered to enhance performance. By optimizing the light that passes through the optical system, the resulting image is sharp, natural, and glare-free. Additionally, these coatings provide a protective armor against adverse environmental conditions the optic will experience through its service life.

**NITROGEN PURGED** - Crimson Trace scope innards are purged with Nitrogen to remove water vapor that can lead to condensation and fogging inside of scopes.

**OPEN REFLEX SIGHT** - An “Open Window” red dot sight that uses a front lens to collimate light from an LED projecting a “dot” onto it for a large field of view and quicker target acquisition.

**PARALLAX SIDE FOCUS** - The Scope focusing adjustment that allows you to focus in on targets at longer ranges and higher magnifications.

**POLYMER CONSTRUCTION** - Made of high strength, robust reinforced polymer to reduce weight but maintain best-in-class durability and rigidity.

**RED DOT SIGHT** - General or generic term referring to any type of unmagnified optic that projects an illuminated red or green “dot” on an unmagnified lens.

# The **CRIMSON TRACE** DEFINITION

**SCAN MODE** - Scan Mode allows the hunter to actively range targets in real time as they move the rangefinder to different positions.

**SPRING-LOADED TOOLLESS TURRETS** - Easily reset your zero on your scope by raising the turret, rotating, and snapping it back down without the use of any tools.

**SHOCKPROOF** - Crimson Trace products undergo a rigorous battery of stress and durability tests that are based on the MIL-STD-810G test protocol.

**THROW LEVER** - A throw lever allows the shooter to quickly and easily adjust the magnification of a scope in those situations where a quick transition is needed.

**TOP ACCESS BATTERY COMPARTMENT** - Allows the user to change the battery without removing the product from the firearm.

**ZERO RESET TURRETS** - After zeroing the scope, these turrets allow you to “reset” the windage and elevation dial to “0” again. This allows quick and easy D.O.P.E. adjustment in the field.

**ZERO STOP TURRETS** - These turrets will allow the scope to return back to a preset zero position quickly.

**1” TUBE DIAMETER** - Means the main body tube of the scope is 1” in diameter. These tubes will fit 1” scope rings.

**1ST FOCAL PLANE** - When zooming in with a 1st focal plane scope, the crosshairs will shrink and enlarge along with the target picture. This means that once you zero in your scope, the hash marks are the same at the lowest magnification and the highest magnification.

**2ND FOCAL PLANE** - When zooming in with a 2nd focal plane scope, ONLY the target picture enlarges while the crosshairs stay the same size. This means that after zeroing in your scope, if you change the magnification, the hash marks will be representing different holdovers for targeting.

**30MM TUBE DIAMETER** - Means the main body of the tube of the scope is 30mm in diameter. This larger diameter allows for greater windage and elevation adjustment for longer range shooting. These tubes will fit 30mm scope rings.

**34MM TUBE DIAMETER** - Means the main body of the tube of the scope is 34mm in diameter. This larger diameter allows for greater windage and elevation adjustment for longer range shooting. These tubes will fit 34mm scope rings.

- ◇ (2) Removable Li-Ion Rechargeable batteries included
- ◇ Rechargeable battery can be changed without removing the RIG™ from the firearm
- ◇ Light tested to ANSI FL1 lighting standards
- ◇ Ergonomic angled foregrip for enhanced handling
- ◇ Preset outputs: 500L, 350L, 200L, 100L, 5L
- ◇ Large + and - brightness buttons for quick adjustment
- ◇ Variable Dimming - To get a desired brightness, press and hold the + or - buttons to increase or decrease brightness levels
- ◇ Ambidextrous swappable ON/OFF switch - The RIG™ ON/OFF switch can be swapped from the right to the left side. This quick adjustment is optimized for end-user preference

INNOVATIVE M-LOK®  
FLUSH MOUNT DESIGN

The RIG™ ON/OFF switch can be swapped from the right to the left side prior to installation. It can also be swapped out for the remote switch to add even more customizable options.

RECHARGEABLE LI-ION  
BATTERY PACK

PIC RAIL ADAPTER PLATE INCLUDED

OPTIONAL 5" REMOTE SWITCH AND CABLE INCLUDED. Not to scale

## THROW LEVER

SKU #: 01-3002489    UPC: 810048570638

**ALL HARDLINE™, HARDLINE™ PRO & BRUSHLINE™ PRO SCOPES**    FIT

**44mm**    INNER RING  
DIAMETER

**1.125"**    LEVER HEIGHT

**POLYMER**    CONSTRUCTION

**PATS:**  
[AOB.COM/PATENTS](http://AOB.COM/PATENTS)

- ◇ Slip-over design
- ◇ Position can be customized for desired angle
- ◇ Robust polymer design for rigidity and light weight
- ◇ Internal nib construction seats into focus ring grooves to prevent slipping
- ◇ Works with all HARDLINE™, HARDLINE™ PRO, BRUSHLINE PRO™ scopes
- ◇ Allen wrench for mounting included

The new Crimson Trace® Throw Lever is the perfect accessory for your Best-In-Class Crimson Trace Scope. This throw lever is designed to work with all CT Hardline™, Hardline™ PRO and Brushline™ PRO Series scopes. The throw lever will give you tactile precision even using thick gloves without being cumbersome. This low profile design helps prevent snags from the throw lever on branches or clothing. It's easily removable so if you wanted to take it off, you just need to use the included allen wrench.

Laserguard® is the trusted household name for comprehensive laser sighting systems. Featuring the Crimson Trace® patented Instinctive Activation™ technology, the laser turns on when you naturally grip your pistol; no need for manual ON/OFF buttons. Each Laserguard® is designed to look like it is part of the firearm. Laserguards mount quickly and securely around a pistol's trigger guard, enhancing your ability to engage threats quickly and accurately.

Laserguard® is the trusted household name for comprehensive laser sighting systems. Featuring the Crimson Trace® patented Instinctive Activation™ technology, the laser turns on when you naturally grip your pistol; no need for manual ON/OFF buttons. Each Laserguard® is designed to look like it is part of the firearm. Laserguards mount quickly and securely around a pistol's trigger guard, enhancing your ability to engage threats quickly and accurately.

REMOTE SWITCH WITH CONSTANT ON  
BUTTON AND MOMENTARY ON/OFF  
PRESSURE PAD

PIC RAIL MOUNT

M-LOK®/KEYMOD MOUNT

- ◇ (2) CR123 Lithium batteries included
- ◇ Rear access battery compartment
- ◇ Attaches to MIL-SPEC 1913 Pic Rails, Keymod or M-LOK®
- ◇ Instant Activation™: Tap-ON/OFF with Momentary ON/OFF
- ◇ High output Cree® XPL LED
- ◇ Tailcap or included remote switch activation
- ◇ Remote switch attachment: hook & loop or double stick tape
- ◇ Can be used as a handheld light

The Crimson Trace® Tactical Light series is a best-in-class family of handheld and long gun tactical lights. Backed by the Crimson Trace® reputation, our CWL-202 offers tail cap or remote activation in 900 peak lumens. When you need a bit more power out of your weapon light experience the power that effective illumination can provide.

## RAIL MASTER® - CMR-208

SKU #: 01-8240    UPC: 610242009336

### INSTANT ACTIVATION™

*Offers tactile response by simply "tapping on" and "tapping off" from either side with the ambidextrous activation control tabs*

The Rail Master® line offers universal fit, unmatched versatility and exceptional value. Among our most popular products, the Rail Master® weapon light is designed to fit pistols, rifles or shotguns with modern accessory rails. Robust construction and high lumen output make the Rail Master® line the definition of weapon light.

SIGHTS

RAPID AIMING DOTS

 **TRAD™**

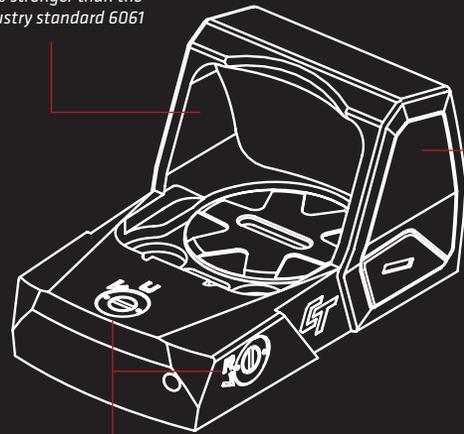

## THE ANATOMY OF A CT RAD™

All Rapid Aiming Dots have the same DNA for premium optics. Despite different sizes, added premium features, and even green dot options, all are constructed with uncompromising quality and performance, making them Coveted Gear.

7075 Series  
Aerospace aluminum  
construction  
30% stronger than the  
industry standard 6061

Side grip texturing helps  
with racking a slide

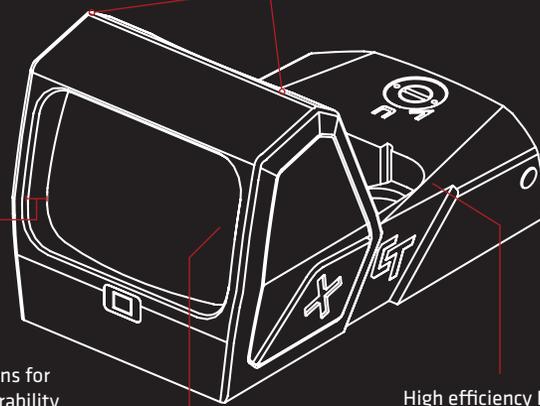

Innovative top strap design deflects force if sight is dropped  
Our engineers developed a better way to reduce stress on the lens of reflex sights. By combining out-of-the-box thinking with next-level physics, we designed a system that both reinforces your optic and reduces stress if it happens to get dropped.

Windage and Elevation adjustment

Recessed lens for  
increased durability

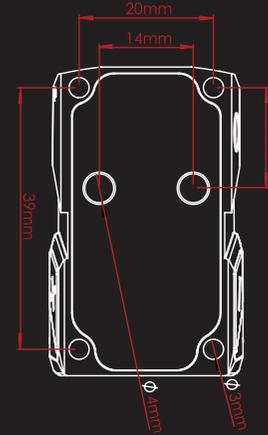

Fully multi-coated lens

High efficiency RCLED  
for long hours of use

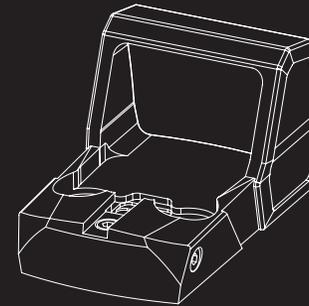

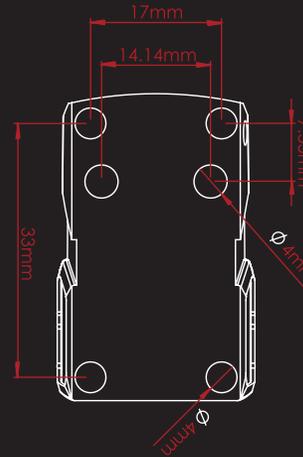

## THE FOOTPRINT OF A CT RAD™

Our Rapid Aiming Dots come with our innovative “RAD” footprint. Both versions of our footprints are compatible with the most popular optics footprints on the market.

**CT RAD™ Footprint** - This footprint is designed for most full size handguns and is compatible with the Docter® style footprint.

**CT micro™ Footprint** - This footprint is designed for most compact handguns and is compatible with the Shield RMS® and JPoint® footprints.

## THE FEATURES OF A CT RAD™

Our Rapid Aiming Dots come with a series of best-in-class features. With 3 different sizes, 2 different models, and 2 different Dot color options, we are positive we can offer you a CT RAD™ with the features you need.

**CT MOTION™ Sensor** - Detects movement of the firearm and automatically turns the reflex sight on. The sight powers off after 2 minutes of zero movement.

**CT RADIANT™ Ambient Light Sensor** - The ambient light sensor automatically adjusts the aiming dot's brightness to the surrounding lighting condition.

**AUTO Shutoff Function** - The sight automatically shuts off after 8 consecutive hours of operation to conserve battery life.

**MANUAL ON/OFF Function** - Allows you to turn on or off the sight by using the side brightness buttons.

**RED DOT** - All CT RAD red dots are 3 MOA for precision targeting.

**GREEN DOT** - All CT RAD green dots are 5 MOA for easy acquisition.

**IPX4 Water Resistance** - Is resistant to rain and splashes from any direction.

**IPX7 Waterproof** - Can be submerged in water up to 1 meter for 30 minutes.

## THE "FIT" OF A CT RAD™

Our CT RAD™ footprint is compatible with the Docter® pattern. Because of this our new red dots can be used with existing manufacturer optics plates. Listed below are some of the top brands and the corresponding mounting plates that work for the CT RAD™.

| MANUFACTURER        | PLATE I.D. | MANUFACTURER      | PLATE I.D. |
|---------------------|------------|-------------------|------------|

The CTS-1100 is an illuminated 3.5x Battlesight for rifles and carbines. Featuring 3.5x magnification and a fully illuminated hybrid BDC (Bullet Drop Compensator) reticle, the CTS-1100 provides a superior field of view for engaging targets at close, mid or long range distances, elevating your long gun's performance instantly. Installed in seconds by utilizing an integrated M1913 Picatinny rail mount, the CTS-1100 boasts a rugged design with deflection fins around the caps for years of use. Designed for professionals, this robust battlesight will perform in the harshest conditions.

Crimson Trace® Brushline™ optics are designed with the hunter in mind and have been purposefully built from the ground up. The line features aerospace grade 1" tubes that are extremely lightweight as to not add extra weight to hunting rifles. They are fully multi-coated, nitrogen purged, waterproof, and ready for whatever elements they encounter. All Crimson Trace® scopes are covered under our FULL LIFETIME warranty and backed by our award-winning customer service team.

Crimson Trace® Hardline™ Pro optics are designed with the experienced tactical and target shooter in mind and have been purposefully built from the ground up. The line features aerospace grade 30mm tubes with First Focal Plane (FFP) options. The line offers short, medium and long-range optics with a variety of custom reticles. They are fully multi-coated, nitrogen purged, shock resistant, and ready for whatever elements they encounter. All Crimson Trace® scopes are covered under our FULL LIFETIME warranty and backed by our award-winning customer service team.

## 4-16x50mm, 30mm TUBE

SKU #: 01-01030

UPC: 810048570409

**1st** FOCAL PLANE

**YES** ILLUMINATED RETICLE

**YES** PARALLAX SIDE FOCUS

**30mm** TUBE DIAMETER

**4"** EYE RELIEF

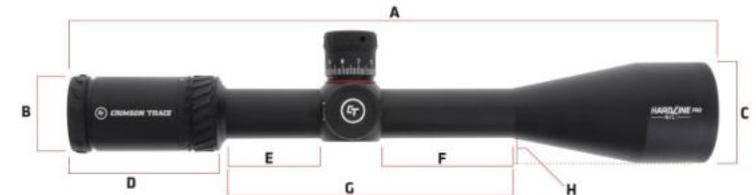

**AEROSPACE ALUMINUM** CONSTRUCTION

**IPX7** WATERPROOF

**25.4 oz** WEIGHT
