- + ONE-HAND WINDAGE AND ELEVATION ADJUSTMENTS

Fire Control is an advanced alignment system that allows you continual, one-hand adjustment of downrange crosshair alignment via a multi-directional control arm. It provides you with continuous adjustment of the front forend support by manipulating the control arm with your fingertips. Once the coarse adjustments have been made to position the rest, the control arm allows fluid movement for precise crosshair alignment without having to change shooting position to loosen or tighten rest components. The result is outstanding control of crosshair alignment in a rock-solid shooting platform which delivers better accuracy than any existing rest. This revolutionary development allows accuracy and speed that previously conventional rifle rests can't offer. The continuous precision adjustment of Fire Control allows the crosshairs to easily and quickly be manipulated as you maintain a perfectly relaxed shooting position.

Clean brass should be the goal of every reloader. Cleaning brass by tumbling is the economical, safe first step in assembling quality handloads. Besides ensuring long life for the most valuable component of your ammunition, cleaning your brass will help reduce wear and tear on your expensive reloading dies, not to mention the chamber of your firearm. Grit and grime from uncleaned brass can become imbedded in the inner surfaces of your sizing dies, scratching and marring every subsequent case. The same grime can be expected to accelerate wear in the chamber and feeding system of your rifle or handgun.
