

CRIMSON TRACE®

2024

WHOLESALE CATALOG

The **CRIMSON TRACE** PROMISE

All Crimson Trace® products are covered under one of our two lifetime warranties. We stand behind our products, both past and future, so all CT products previously sold are grandfathered in to the Lifetime Warranty. These warranties are our pledge to you, our advocates, that you have chosen best-in-class gear to outfit your chosen need.

**Limitations and restrictions apply. See Crimson Trace website for details*

**Limitations and restrictions apply. See Crimson Trace website for details*

www.crimsontrace.com/warranty

The **CRIMSON TRACE**® DEFINITION

All Crimson Trace® products are packed full of innovative and patented features. Listed below are some of our best-in-class features you will find on our Coveted Gear.

AEROSPACE GRADE ALUMINUM - An aluminum alloy that can stand up to the rigors of aircraft and space flight.

(AMR) ANGLED MODIFIED RANGE - Angled Modified Range uses the Line of Sight range and the angle of incline/decline to the target to calculate the “horizontal distance” the bullet travels from shooter to the target. AMR is very accurate for shorter target distances (under 400 yards) and archery hunters.

EXAMPLE: In AMR mode if the target is 400 yards away horizontally, it is 363 yards away if the shooter is on a 25% decline.

ANSI FL1 STANDARD - The ANSI FL1 standard makes it easier for you to compare flashlights from different manufacturers. The ANSI FL1 standards allow users to rate and compare different features.

AUTO-SHUTOFF FUNCTION - The sight automatically shuts off after 8 consecutive hours of operation to conserve battery life.

BDC RETICLE - A Bullet Drop Compensation reticle or (BDC) is designed to compensate for the trajectory of a specific ammunition. These reticles have built-in hold-overs to allow the shooter to shoot at different ranges eliminating guesswork.

BOTTOM ACCESS BATTERY COMPARTMENT - Low profile but requires the user to remove the product from the firearm to change the battery.

CAPPED TURRETS - Twist off caps that protect the turrets from debris, or accidental adjustment.

CLOSED (TUBE) REFLEX SIGHT - A “Tube” reflex sight that has the LED and lens fully enclosed. This offers a brighter reticle and can have smaller “dots” for longer range targeting. The fully enclosed design also protects against debris, water, or weather that can block the LED on Open Reflex Sights.

CT MICRO™ FOOTPRINT - This footprint is designed for most compact handguns and is compatible with the Shield RMS® and JPoint® footprints.

CT MOTION™ SENSOR - Detects movement of the firearm and automatically turns the reflex sight on. The sight powers off after 2 minutes of being stationary.

CT RAD™ FOOTPRINT - This footprint is designed for most full size handguns and is compatible with the Docter® style footprint.

CT RADIANT™ AMBIENT LIGHT SENSOR - The ambient light sensor automatically adjusts the aiming dot's brightness to the surrounding lighting condition.

EXPOSED TURRETS - Visible turrets that are quick to adjust for D.O.P.E.-ing at various distances.

EXTRA LOW DISPERSION GLASS - ELD glass helps correct chromatic aberrations, or optical color defects, caused when different light wavelengths do not converge at the same point after passing through optical glass.

FIRST MODE - Allows the hunter to get the range of the object that has the best feedback from the laser on a laser rangefinder. This mode is typically used when a target is unobstructed and in clear view.

FLIP-UP SCOPE CAPS - A set of spring loaded polymer end caps for Riflescopes. These end caps protect the scope during transportation and inclement weather. They can be quickly opened with a flip of your finger instead of having to be manually removed and stored.

FULL CO-WITNESS - Red dots with Full Co-Witness allow you to use the red dot and the back up iron sights at the same time. This greater functionality means that in case the red dot fails, you can still utilize the iron sights without having to remove the red dot sight.

The **CRIMSON TRACE** DEFINITION

GREEN DOT - All CT RAD™ green dots are 5 MOA for easy acquisition.

ILLUMINATED RETICLE - A glass etched reticle that can be illuminated with different colors for better low light targeting.

IPX4 WATER RESISTANT - Is resistant to water sprayed at the product from 360° for 30 minutes.

IPX7 WATERPROOF - Can be submerged in water up to 1 meter for 30 minutes.

INSTINCTIVE ACTIVATION™ - Crimson Trace® Instinctive Activation™ technology is a best-in-class feature. Fully ambidextrous, all CT products incorporating Instinctive Activation™ are activated as end-users naturally grip their firearm.

INSTANT ACTIVATION™ - “Tap ON/OFF” function allows the device to be deployed instantly. No long button push or delayed response.

LAST MODE - Allows the hunter to get the range of the object that is furthest distance in feedback from the laser on a laser rangefinder. This mode is often used when shooting through brush or when a target is not in clear view.

(LRM) LONG RANGE MODE - Long Range Mode allows the user to range areas at longer distances. This mode is good for hunters wanting to know the distance of far off landmarks.

(LOS) LINE OF SIGHT MODE - Line of Sight mode is the direct straight line from the shooter to the target without compensation due to angle. This mode is good for long range shooters or hunters wanting to know fixed distances.

EXAMPLE: In LOS mode the target is 400 yards away even if the shooter is on a 25% decline.

LPVO LOW POWER VARIABLE OPTIC - This type of magnified optic often starts at 1x magnification and increases anywhere from 4x, 6x to 10x. At 1x the optic can function almost like a red dot sight, with almost zero magnification allowing for quicker target acquisition.

MANUAL ON/OFF FUNCTION - Allows you to turn the sight on or off by using the brightness buttons.

MIL SCOPE - Stands for Milliradians, which correlates to the arc of a circle. A Milliradian circle circumference is divided into 6.28 equal radian sections. This is then divided into 1,000 equal parts called Milliradians. There are 6,280 Milliradians in a circle. 1 MIL spreads about 3.43” at 100 yards.

MOA SCOPE - Stands for the Minute of Angle, which correlates to the minute hand of a 360-degree clock face. Each minute refers to 1/60th of a degree, similar to the minutes of an hour. 1 MOA spreads about 1” at 100 yards.

MOA DOT - Determines the “size” of the dot or how much of the target the “dot” will cover. Using the MOA equation of 1” at 100 yards, a 2 MOA dot will cover 2” of the target at 100 yards and 4” of the target at 200 yards. Larger dots cover more of the target and are better for quick acquisition at closer ranges. Smaller dots will cover less of the target at greater distances.

(MOC) MAXIMUM OPTIC CLARITY - Crimson Trace® Optics are fully multi-coated with our proprietary MOC lens coatings. These coatings are engineered to enhance performance. By optimizing the light that passes through the optical system, the resulting image is sharp, natural, and glare-free. Additionally, these coatings provide a protective armor against adverse environmental conditions the optic will experience through its service life.

NITROGEN PURGED - Crimson Trace scope innards are purged with Nitrogen to remove water vapor that can lead to condensation and fogging inside of scopes.

OPEN REFLEX SIGHT - An “Open Window” red dot sight that uses a front lens to collimate light from an LED projecting a “dot” onto it for a large field of view and quicker target acquisition.

PARALLAX SIDE FOCUS - The Scope focusing adjustment that allows you to focus in on targets at longer ranges and higher magnifications.

POLYMER CONSTRUCTION - Made of high strength, robust reinforced polymer to reduce weight but maintain best-in-class durability and rigidity.

RED DOT SIGHT - General or generic term referring to any type of unmagnified optic that projects an illuminated red or green “dot” on an unmagnified lens.

The **CRIMSON TRACE** DEFINITION

SCAN MODE - Scan Mode allows the hunter to actively range targets in real time as they move the rangefinder to different positions.

SPRING-LOADED TOOLLESS TURRETS - Easily reset your zero on your scope by raising the turret, rotating, and snapping it back down without the use of any tools.

SHOCKPROOF - Crimson Trace products undergo a rigorous battery of stress and durability tests that are based on the MIL-STD-810G test protocol.

THROW LEVER - A throw lever allows the shooter to quickly and easily adjust the magnification of a scope in those situations where a quick transition is needed.

TOP ACCESS BATTERY COMPARTMENT - Allows the user to change the battery without removing the product from the firearm.

ZERO RESET TURRETS - After zeroing the scope, these turrets allow you to “reset” the windage and elevation dial to “0” again. This allows quick and easy D.O.P.E. adjustment in the field.

ZERO STOP TURRETS - These turrets will allow the scope to return back to a preset zero position quickly.

1” TUBE DIAMETER - Means the main body tube of the scope is 1” in diameter. These tubes will fit 1” scope rings.

1ST FOCAL PLANE - When zooming in with a 1st focal plane scope, the crosshairs will shrink and enlarge along with the target picture. This means that once you zero in your scope, the hash marks are the same at the lowest magnification and the highest magnification.

2ND FOCAL PLANE - When zooming in with a 2nd focal plane scope, ONLY the target picture enlarges while the crosshairs stay the same size. This means that after zeroing in your scope, if you change the magnification, the hash marks will be representing different holdovers for targeting.

30MM TUBE DIAMETER - Means the main body of the tube of the scope is 30mm in diameter. This larger diameter allows for greater windage and elevation adjustment for longer range shooting. These tubes will fit 30mm scope rings.

34MM TUBE DIAMETER - Means the main body of the tube of the scope is 34mm in diameter. This larger diameter allows for greater windage and elevation adjustment for longer range shooting. These tubes will fit 34mm scope rings.

The RIG™ Pro offers the ultimate modularity and versatility for rail-equipped rifles and carbines. The green laser sight + tactical light system is combined with an angled foregrip for reduced rail use and maximum precision targeting in variable lighting conditions. The RIG™ Pro has a remote laser module with M-LOK®, Pic Rail mounts for both the laser and remote switch. Its low-profile assembly allows you to mount it almost anywhere on the rail while still being able to utilize valuable rail space for other accessories.

- ◇ RIG™ Pro can be mounted to most M1913 Pic Rails or M-LOK® sections
- ◇ Ergonomic angled foregrip for enhanced handling
- ◇ Large + and - brightness buttons for quick light adjustment
- ◇ RIG™ PRO Modes: Laser only ON, Light only ON, Laser/Light ON

Join the next generation in magnified target ranging. The Crimson Trace® HorizonLine® Pro Laser Rangefinding Binoculars combine Best-In-Class optical magnification with high quality laser rangefinding. No need to carry multiple devices into the field, saving space, weight and time on target. The CT T-OLED display is crisp, clear and easy to use and it is packed with the most needed features. High quality materials combined with next generation technology makes the HORIZONLINE® Pro Laser Rangefinding Binoculars top of the field.

HORIZONLINE® PRO SPECIFICS

- ◇ (1) CR2 battery included
- ◇ Easy-to-Use menu makes adjustment quick
- ◇ **CT RADIANT™** ambient light sensor - The ambient light sensor automatically adjusts the reticle's brightness to the surrounding lighting condition
- ◇ Auto-Shutoff function conserves battery

Adjustable Bivy and Bino harness included. Hunt ready right out of the box.

CONSTRUCTION

- ◇ Includes multiple plates to fit the CT RAD™ and CT RAD™ Micro, CTS-1250 and CTS-1550 red dot sights
- ◇ Extremely low profile to minimize sight height over the pistol bore

The CT RAD™ Dovetail Mounting Kit uses your pistol's existing dovetail notch to easily mount without the need to cut your slide for optics.

The Crimson Trace® CT RAD™ Dovetail Mounting Kit lets you mount your best-in-class red dot on your trusted Smith & Wesson® pistol. No need for expensive gunsmith work to cut your slide, this kit uses the existing dovetail notch to secure the low profile adapter plate to the slide. Then simply attach your CT RAD™, CT RAD™ PRO, CT RAD™ MICRO or CT RAD™ MICRO PRO to that adapter plate. The Dovetail Mounting Kit is compatible with some of the most popular Smith & Wesson® pistols on the market today. Now you can use the best red dots on the market with the pistol you have trusted for years. At Crimson Trace® failure is not an option.

The HRO™ (Heavy Recoil Optic) is the next generation of quick acquisition tactical reflex sights. Packed with best-in-class features like CT Motion “shake-to-wake” sensor and integrated Pic Rail mount, the HRO™ looks good and performs even better. When Failure is NOT an option, choose Crimson Trace®.

RAPID AIMING DOTS

 **TRAD™**

THE ANATOMY OF A CT RAD™

All Rapid Aiming Dots have the same DNA for premium optics despite different sizes. By adding premium features, and even green dot options, all are constructed with uncompromising quality and performance.

7075 Series
Aerospace aluminum
construction
30% stronger than the
industry standard 6061

Side grip texturing helps
with racking a slide

Innovative top strap design deflects force if sight is dropped
Our engineers developed a better way to reduce stress on the lens of reflex sights. By combining out-of-the-box thinking with next-level physics, we designed a system that both reinforces your optic and reduces stress if it happens to get dropped.

Windage and Elevation adjustment

Recessed lens for
increased durability

Fully multi-coated lens

High efficiency RCLED
for long hours of use

THE FOOTPRINT OF A CT RAD™

Our Rapid Aiming Dots come with our innovative “RAD” footprint. Both versions of our footprints are compatible with the most popular optics footprints on the market.

CT RAD™ Footprint - This footprint is designed for most full size handguns and is compatible with the Docter® style footprint.

CT micro™ Footprint - This footprint is designed for most compact handguns and is compatible with the Shield RMS® and JPoint® footprints.

THE FEATURES OF A CT RAD™

Our Rapid Aiming Dots come with a series of best-in-class features. With 3 different sizes, 2 different models, and 2 different Dot color options, we are positive we can offer you a CT RAD™ with the features you need.

CT MOTION™ Sensor - Detects movement of the firearm and automatically turns the reflex sight on. The sight powers off after 2 minutes of zero movement.

CT RADIANT™ Ambient Light Sensor - The ambient light sensor automatically adjusts the aiming dot's brightness to the surrounding lighting condition.

AUTO Shutoff Function - The sight automatically shuts off after 8 consecutive hours of operation to conserve battery life.

MANUAL ON/OFF Function - Allows you to turn on or off the sight by using the side brightness buttons.

RED DOT - All CT RAD red dots are 3 MOA for precision targeting.

GREEN DOT - All CT RAD green dots are 5 MOA for easy acquisition.

IPX4 Water Resistance - Is resistant to rain and splashes from any direction.

IPX7 Waterproof - Can be submerged in water up to 1 meter for 30 minutes.

THE "FIT" OF A CT RAD™

Our CT RAD™ footprint is compatible with the Docter® pattern. Because of this our new red dots can be used with existing manufacturer optics plates. Listed below are some of the top brands and the corresponding mounting plates that work for the CT RAD™.

THE BRUSHLINE® PRO SERIES BREAKDOWN

Crimson Trace® Brushline® Pro optics are designed with the experienced hunter in mind and have been purposefully built from the ground up. The Brushline® Pro series includes options for pistols, muzzleloaders, shotguns, and hunting rifles. All of our custom BDC reticles have been optimized for the most common firearms that they will be used on. Our PRO line has added features such as Aluminum turret caps and Easy-Turn magnification rings. Our Brushline® Pros are fully multi-coated and have exceptional light transmission and glass quality. All Crimson Trace® scopes are covered under our FULL LIFETIME warranty and backed by our award-winning customer service team.

INSTINCTIVE ACTIVATION™
Instinctive Activation™ is activated as end-users naturally grip their firearm.

Laserguard® is the trusted household name for comprehensive laser sighting systems. Featuring the Crimson Trace® patented Instinctive Activation™ technology, the laser turns on when you naturally grip your pistol; no need for manual ON/OFF buttons. Each Laserguard® is designed to look like it is part of the firearm. Laserguards mount quickly and securely around a pistol's trigger guard, enhancing your ability to engage threats quickly and accurately.

Its unmatched versatility and high lumen output make the Laserguard® Pro among Crimson Trace's most popular products. Available in red or green laser sights the Rail Master® comes with ambidextrous Instant Activation™. With a Peak 400 lumen white LED light, the Laserguard® Pro will illuminate even the darkest areas. The Rail Master® is designed to fit pistols, rifles or shotgun with modern accessory rails.

INSTINCTIVE ACTIVATION™

Instinctive Activation™ is activated as end-users naturally grip their firearm.

- ◇ (2) CR2032 Lithium batteries included
- ◇ Fits over factory grip
- ◇ Rear grip Instinctive Activation™ activates laser when you naturally grip the firearm
- ◇ Master ON/OFF switch for battery conservation
- ◇ Scales made of robust polymer material
- ◇ Pre-sighted from the factory at 50 feet

Lasergrips® are sure to impress, designed to seamlessly replace factory grips and provide a best-in-class laser aiming solution. Featuring ergonomic and beautiful premium material side panels with a rubber overmolded activation button; these are the ultimate laser sights. Now adding a laser sight to your pistol doesn't mean you need a new holster.

The ultimate aiming solution is now even better! Lasersaddle® is a re-imagining of shotgun targeting systems. Unrivaled performance allows for confidence when time is critical and quick targeting is necessary. Ergonomic controls allow Lasersaddle® models to be used instinctively and remain low profile. New, more compact design allows the option of adding a Pic Rail without extra bulk.

SIGHTS

RAPID AIMING DOTS

 **TRAD™**

THE ANATOMY OF A CT RAD™

All Rapid Aiming Dots have the same DNA for premium optics. Despite different sizes, added premium features, and even green dot options, all are constructed with uncompromising quality and performance, making them Coveted Gear.

7075 Series
Aerospace aluminum
construction
30% stronger than the
industry standard 6061

Side grip texturing helps
with racking a slide

Innovative top strap design deflects force if sight is dropped
Our engineers developed a better way to reduce stress on the lens of reflex sights. By combining out-of-the-box thinking with next-level physics, we designed a system that both reinforces your optic and reduces stress if it happens to get dropped.

Windage and Elevation adjustment

Recessed lens for
increased durability

Fully multi-coated lens

High efficiency RCLED
for long hours of use

THE FOOTPRINT OF A CT RAD™

Our Rapid Aiming Dots come with our innovative “RAD” footprint. Both versions of our footprints are compatible with the most popular optics footprints on the market.

CT RAD™ Footprint - This footprint is designed for most full size handguns and is compatible with the Docter® style footprint.

CT micro™ Footprint - This footprint is designed for most compact handguns and is compatible with the Shield RMS® and JPoint® footprints.

THE FEATURES OF A CT RAD™

Our Rapid Aiming Dots come with a series of best-in-class features. With 3 different sizes, 2 different models, and 2 different Dot color options, we are positive we can offer you a CT RAD™ with the features you need.

CT MOTION™ Sensor - Detects movement of the firearm and automatically turns the reflex sight on. The sight powers off after 2 minutes of zero movement.

CT RADIANT™ Ambient Light Sensor - The ambient light sensor automatically adjusts the aiming dot's brightness to the surrounding lighting condition.

AUTO Shutoff Function - The sight automatically shuts off after 8 consecutive hours of operation to conserve battery life.

MANUAL ON/OFF Function - Allows you to turn on or off the sight by using the side brightness buttons.

RED DOT - All CT RAD red dots are 3 MOA for precision targeting.

GREEN DOT - All CT RAD green dots are 5 MOA for easy acquisition.

IPX4 Water Resistance - Is resistant to rain and splashes from any direction.

IPX7 Waterproof - Can be submerged in water up to 1 meter for 30 minutes.

THE "FIT" OF A CT RAD™

Our CT RAD™ footprint is compatible with the Docter® pattern. Because of this our new red dots can be used with existing manufacturer optics plates. Listed below are some of the top brands and the corresponding mounting plates that work for the CT RAD™.

STEEL &
ALUMINUM

CONSTRUCTION

- ◇ Includes multiple plates to fit the CT RAD™ and CT RAD™ Micro, CTS-1250 and CTS-1550 red dot sights
- ◇ Extremely low profile to minimize sight height over the pistol bore

The CT RAD™ Dovetail Mounting Kit uses your pistol's existing dovetail notch to easily mount without the need to cut your slide for optics.

The Crimson Trace® CT RAD™ Dovetail Mounting Kit lets you mount your best-in-class red dot on your trusted Smith & Wesson® pistol. No need for expensive gunsmith work to cut your slide, this kit uses the existing dovetail notch to secure the low profile adapter plate to the slide. Then simply attach your CT RAD™, CT RAD™ PRO, CT RAD™ MICRO or CT RAD™ MICRO PRO to that adapter plate. The Dovetail Mounting Kit is compatible with some of the most popular Smith & Wesson® pistols on the market today. Now you can use the best red dots on the market with the pistol you have trusted for years. At Crimson Trace® failure is not an option.

Crimson Trace® Brushline® optics are designed with the hunter in mind and have been purposefully built from the ground up. The line features aerospace grade 1" tubes that are extremely lightweight as to not add extra weight to hunting rifles. They are fully multi-coated, nitrogen purged, waterproof, and ready for whatever elements they encounter. All Crimson Trace® scopes are covered under our FULL LIFETIME warranty and backed by our award-winning customer service team.

Crimson Trace® Brushline® Pro optics are designed with the experienced hunter in mind and have been purposefully built from the ground up. The Brushline® Pro series includes options for pistols, muzzleloaders, shotguns, and hunting rifles. All of the reticles have been calibrated for the firearms platform that they will be placed on. The line features aerospace grade 1" and 30mm tubes that are extremely lightweight. The scopes are fully multi-coated and have exceptional light transmission and glass quality. All Crimson Trace® scopes are covered under our FULL LIFETIME warranty and backed by our award-winning customer service team.

Join the next generation in magnified target ranging. The Crimson Trace® HorizonLine® Pro Laser Rangefinding Binoculars combine Best-In-Class optical magnification with high quality laser rangefinding. No need to carry multiple devices into the field, saving space, weight and time on target. The CT T-OLED display is crisp, clear and easy to use and it is packed with the most needed features. High quality materials combined with next generation technology makes the HORIZONLINE® Pro Laser Rangefinding Binoculars top of the field.

HORIZONLINE® PRO SPECIFICS

- ◇ (1) CR2 battery included
- ◇ Easy-to-Use menu makes adjustment quick
- ◇ **CT RADIANT™** ambient light sensor - The ambient light sensor automatically adjusts the reticle's brightness to the surrounding lighting condition
- ◇ Auto-Shutoff function conserves battery

Adjustable Bivy and Bino harness included. Hunt ready right out of the box.
